INTRODUCTION

Before proceeding with the subject proper it will be necessary to have some concrete knowledge about the fugues.

Grove's "Dictionary of Music and Musicians" defines the fugue as a "movement in which a definite number of voices combine in stating and developing a single theme, the interest being cumulative."

The word "fugue" comes from the Latin verb, "fugare", which means to put to flight, the idea being that one voice of the fugue is pursuing the other voices. Every development of the fugue is more or less directly dependant upon the principle theme or subject. The main idea of the fugue is that of one voice contrasting with other voices. In order that there may be this necessary contrast a fugue must be written in a definite number of parts, at least two.

Fugues may be classified as:

1. Real
2. Tonal
3. Fughetta
4. Fugues of Imitation
5. Irregular--merely pieces in fugal style.

Every fugue must have:

- I. A subject
- II. An answer
- III. May have a counter subject
- IV. Sometimes a stretto

In addition to these constituents which, with the exception of the stretti, are absolutely necessary there are

other contrapuntal devices for the purpose of sustaining the interest such as:

- V. The episode
- VI.. The codetta
- VII. The pedal point
- VIII. The coda

In general structure the fugue is made up of:

- IX. Exposition
- X. Development section
- XI. Recapitulation.

I. The subject of a fugue is the chief theme or melody upon which the entire fugue is based. It should have the following basic characteristics:

- (a) Moderate length.
- (b) Freedom from modulations except in the dominant of the principal key.
- (c) Should be easily recognized wherever it recurs.
- (d) Following the rule of a melody, fugue-subjects may begin on any part of the measure but should generally end on an accent.
- (e) Scale passages are frequent in fugue subjects.

II. The answer is primarily a transposition of the subject into the key of the perfect fifth above or fourth below the key of the subject. The relation of a subject to the answer determines the character of the fugue.

An Answer to a fugue may be real or tonal.

A Real Answer is an exact transposition of the subject one fifth above or a fourth below the original key.

Example--Real Fugue

The image shows two staves of handwritten musical notation. The top staff is labeled "Subj." and the bottom staff is labeled "ans.". The notation uses vertical stems and horizontal dashes to represent pitch and rhythm. The piece is in common time, with a key signature of one sharp. The music consists of two measures of each staff, followed by a repeat sign and another two measures. The name "Handel" is written at the end of the second measure of the answer staff.

A Tonal Answer is a modified transposition of the subject which really resolves into answering the dominant by tonic and the tonic by the dominant.

Example--Tonal Fugue

The image shows two staves of handwritten musical notation. The top staff is labeled "Subj." and the bottom staff is labeled "ans.". The notation uses vertical stems and horizontal dashes. The piece is in common time, with a key signature of one sharp. It consists of two measures of each staff, followed by a repeat sign and another two measures. The notation includes various rests and dynamic markings like "f" and "p".

III. THE COUNTER-SUBJECT is a supplementary melody intended to accompany the subject and answer. As the accompaniment must sometimes be placed in an upper and sometimes a lower part it is necessary that the subject and counter-subject be written in invertible counterpoint, generally of the octave. The counter-subject (or second subject) of a double fugue is in all respects as important as its companion subject.

IV. THE STRETTO--Stretto is derived from the Italian verb "stringere" meaning to bind together. It is the narrowing of the interval of time between the subject and answer. In the Stretto the answer may lead and the subject reply a fifth below, the answer may be at the octave or both subject and answer may be used

in augmentation, diminution or contrary motion. All voices of the fugue may take part in the stretto.

V. THE CODETTA. When the subject and answer have been developed to some extent other voices enter in turn with the subject or answer alternately; sometimes there is a duet between two voices lengthened by a few measures before the entry of the third voice: This is a little digression and is called a Codetta.

VI. THE EPISODE. Intermediate matter introduced as contrast and relief to the more essential parts of the fugue is called an Episode. Frequently the Episode is the means of modulation. The best episodes are those founded on some motif previously employed in the fugue. The individuality of the composer is often exerted in the Episode.

VII. THE PEDAL is a sustained tone, usually on the dominant or the tonic and sometimes both (in which case the tonic must appear last) upon which points of imitation are constructed.

VIII. THE CODA. Coda is the Italian for tail, and the part of music to which it is ascribed is expressive of it. The Coda is used in a fugue to give a rigorous ending to the entire composition.

IX. THE EXPOSITION of a fugue serves as an introduction of the parts, of which there may be from two to eight. After all the parts have entered there is a short digression or Episode which gives interest to the composition and keeps it from becoming monotonous.

X. THE COUNTER-EXPOSITION or DEVELOPMENT section is a sort of reflected exposition in which the subject and answer accompanied by the counter-subject are presented according to some

modulatory scheme as suits the taste of the composer. This is the largest division of the fugue.

XI. THE RECAPITULATION is what the word implies. In this section the themes are announced in the original key.

Types of Fugues:

1. A Real fugue is one in which the answer is throughout at the interval of a fifth above or fourth below the subject.

2. A Tonal fugue is one in which the answer deviates somewhat from the original subject.

3. A fugue of Imination is one in which the answer is always similar to the subject. In a fugue of this type the composer is at liberty to introduce changes and curtail the answer as he sees fit. In a fugue of Imitation the answer may be in tonic, dominant, sub-dominant, mediant, sub-mediant, super-tonic, leading-tone or their compounds.

4. The Fughetta is a short fugue usually not over twenty measures. Many four-part vocal fugues which are to be found in cantatas and oratorios are of this type.

5. Irregular Fugues or pieces in fugal style which do not adhere to all the characteristics of a real or tonal fugue but still have the ear-marks of a fugue.

A Choral is often introduced into a fugue as a free part in the chorus "But our Lord," in Mendelssohn's "St. Paul."

J. S. Dwight has written the following on the aesthetic character or expression of the fugue in his article on the Fugues of Bach:-

"A fugue is the unfolding of a musical germ; it is the

development, the opening out, the organic growth of a musical thought, first lying latent in any simple phrase, according to its innate law. In its effect, as you get it on the grand scale from a multitudinous chorus, it is the theme echoed back reflected from all quarters, till it becomes all-pervading. As a form of art it is analogous to Gothic architecture."¹

"The fugue is a comparatively modern development of what we now call canon, which during the sixteenth century was called fuga.²

Johann Joseph Fux, a native of Gratz, Styria, who lived from 1660 to 1741 and who was a master of composition and interweaving contrapuntal forms, was perhaps the earliest composer to develop the fugue.³ The "Gradus ad Parnossum," a treatise on the theory and practice of composition, was studied by Cherubini, Mozart, Haydn, not to mention Bach to whom may be given much of the credit for the development and perfection of the fugue form.

Part III

Conclusion

To the casual reader the word, fugue, means little or nothing; it is hoped that the introduction has given some idea of its main characteristics.

The strict fugue,--ie--that of strict imitation at the fifth above or a fourth below the subject as announced, is very fast disappearing, from choral works at least, and a canonic imitation which in the early stages of musical composition was called fuga is taking its place.

In Haydn's oratorios "The Seasons" and "The Creation", which mark the beginnings of modern oratorio as we now know it, there is very little of the fugal element. Mendelssohn who was a great student of Bach who in turn perfected the fugal form in its strictest sense uses some fugal treatment but does not develop his themes to any considerable length.

In all the oratorios examined there was never more than one fugue of any length. This fugue was most often toward the close of the composition and had for its principal theme phrases which were more emphatic after the fugal repetition.

The extremely modern composers, as for example Saint-Saens, do not use the strict fugue at all but employ rather, the canonic repetition.

Modern composers are tending toward a greater realism in their music just as literary creators are giving more attention to content and less to form. Thus, there is every indication that the fugue as a strict form of musical composition will

gradually disappear.
